

Andrea Lustgarten Fischbach

CIM 643

Final Project - Landing Page: andlustf.github.io

Due 11:59pm on May 12

Rational document

Regardless of your choice, submit a rationale document that explains why you chose the option you did, and list any inspirations or code (like libraries, tutorials, google searches) that you used to help make your project.

For my final project, I decided to create what would be a landing page for my portfolio, after endless research and going on the internet trying to find what would be the perfect portfolio for me, I decided to come up with a concept of my own: I keep too many tabs open.

I went ahead and started researching on portfolios I liked, I even went a little overboard, I noted on things I liked, solely called out on 1 or 2 items per site:

<https://www.stephcarrasco.com/> — animation of logo

<http://giorgialupi.com/> — header design & copy on screen

<https://www.adessigner.com/> — sentence animation on home screen, logo rotating, project page (thumbnails)

<https://jonathanalpmyr.com/> — animation and typeface on Home Screen

<https://francoisxaviermanceau.com/> — color palette

<https://antara.studio/> — overall design, color palette, animations

<https://leonard.agency/en/> — logo animation at the beginning, overall design

<https://adrienlaurent.fr/> — intro video, overall color palette and design

<https://malvah.co/> — design, color palette, interactions

<https://mariana.nyc/> — simplicity

<https://marinarutenberg.com/> — description of herself, and about me page, thumbnails, and project pages

<https://www.the54d.com/que-es.php> — menu interactions

<https://cathrine.co/> — type interaction, typeface on art director, custom cursor

<https://laurenacampora.fun/About> — about page

<https://heckhouse.com/> — simplicity of homepage type designed, portfolio pages

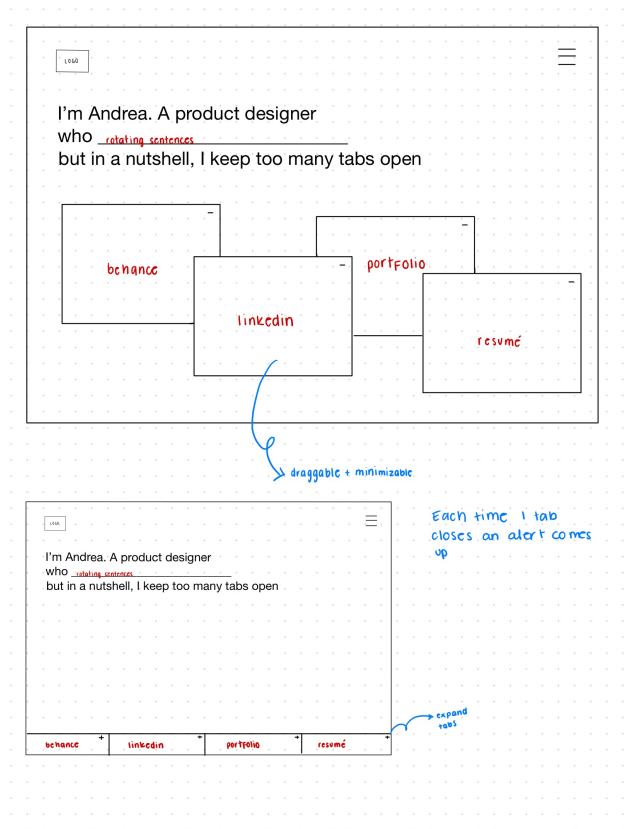

<https://www.stacilin.com/>

<https://www.errrres.com/> — copywriting
<https://vj-type.com/> —
<http://pennybanks.com/> — minimalism
<https://www.verachen.me/> — copy line, project layout and content
<https://zacneulieb.com/> — logo animation
<https://mad.ac/> — use of widgets
<https://marier.design/>
<https://http.studio/>
<https://www.richardsancho.com/index.html> — button at the bottom right
<https://2019.carolynzhang.com/> — feels like a resume
<https://www.hyumankind.com/>
<https://jonasreymondin.com/> — invert colors top left
<https://ajamariejohnson.com/> — nice layout
<https://gerardmarin.com/About>
<http://www.losiento.net/>
<https://teddyg.net/>
<https://aaadaaam.com/>
<http://www.kelly-stevens.com/>

Although I knew coding my own website for this assignment would be logically impossible, I did know I wanted it to be creative, so I wanted it to be a main hub for all of my subsites:

1. LinkedIn
2. Behance
3. Portfolio
4. Resume
5. About me page

First I sketched out what I wanted my website to look like:

I knew I wanted an animated typing effect in my header, which I had already done in a previous assignment, I implemented a typing js code, that I followed an online tutorial from YouTube:

Then I created the basic html file where I laid out all the elements of my page, I started simple with 2 windows, and created a js file to create the hide and show function for my “tabs”. Once the JS file was up and running, I proceeded to styling.

Everything was styled in CSS, except for the images in the containers that were mockups created by me, the buttons on the windows, were done following a W3 tutorial:

https://www.w3schools.com/howto/howto_css_circles.asp

Additionally, I made all the links open to new tabs, using the following target=“_blank” attribute in html, this was the link to my tutorial:

https://www.w3schools.com/tags/tryit.asp?filename=tryhtml_link_target
